

Dax launches LAN extender

DQW NEWS BUREAU
Chennai, Jan 4

Dax Networks has come up with DX-4044, a 4Mbps LAN extender, targeted at small, medium and large enterprises.

"DX-4044 has the functions of single-paired digital subscriber loop (SHDSL) 4-wire router, which provides communication access solution. With these SHDSL routers, our customers will be able to leverage the latest in broadband technologies and meet the growing data communication needs," said Subashini Prabhakar, Chief Technology Manager, Dax Networks.

"This LAN extender features multi-DMZ, virtual server mapping and VPN pass-through for safeguarded connections. It follows simple network management protocol (SNMP), which enables network administrators to manage network performance, monitor and troubleshoot network problems, and plan for network growth. It supports four ports—10Base-T/100Base-T auto-negotiation and auto-MDIX switching ports, which allows easy configuration and management with password control for various application environments. DX-4044 is priced at Rs 50,000," she further informed.

On the road ahead, Prabhakar said that Dax plans to market its products through its countrywide channel network.
