

Dax Networks launches DX-2104-NAS

By *VARIndia* Correspondent

Dax Networks, one of India's top three networking companies, has launched DX-2104-NAS, a Unified Storage Device. DX-2104-NAS comes with a populated capacity of 2TB SATA, scalable to 4TB and features in the company's Networking Infrastructure Solutions range. This device is part of Dax's portfolio of new-generation Networking Access, Connectivity and Storage products designed for the Indian SMB market.

DX-2104-NAS has a built-in auto desktop/server backup module, enabling rapid backups from individual client machines. It also supports software accelerated RAID (Redundant Array of Independent Disks), ensuring full data redundancy with protection against hardware failure.

DX-2104-NAS enables licence-based storage on an appliance basis, rather than user basis which happens to be an added advantage for the business environment. It also comes with a 64-bit CPU with single/dual processors, offering rapid accessibility to data.

DX-2104-NAS enables 100% adaptability to different OS environments, increasing data accessibility and management. It is also equipped with IPSAN and iSCSi functionality in a single firmware.
