

SECURITY APPLIANCE**IOLAN secure device servers**

Dax Networks in partnership with Perle has launched IOLAN Secure Device Servers. The server comes with an advanced security functionality to perform serial to ethernet management, offers the next generation IP (IPv6 technology) and helps maximize uptime for remote equipment. It will enable administrators to securely access serial devices. IOLAN SDS has a software selectable EIA-232/422/485 interface capability which simplifies set-up and eliminates mechanical tampering associated with DIP switch based

products. The on-board RJ11 modem connection provides a more secure and reliable connection to the POTS network when compared to models that require an external RJ45 to RJ11 dongle. It is available in 1, 2, 4, 8, and 16, port sizes for all the serial application needs. Models are also available with an integrated v.92 modem, support for power over ethernet (PoE) and extended temperature ranges. This product comes with lifetime warranty and online support for customers. Dax plans to market it through its channel across the country. Customers can also place orders online at www.daxnetworks.com.

Price: Rs 1,40,000/-
