

## **Dax Switches with Rapid Network Recovery**

**CRN Network, September 1, 2009, 1300 hrs**

A series of industrial-grade Ethernet switches, the DX-526 supports network recovery with a reaction time of under 10ms for over 250 switches.

The network recovery protection between X-Ring groups is ensured by the Dual and Couple Ring technology. Dual homing is present as a back-up to the X-Ring groups when connecting to the upper layer or core switches. The alarm system immediately notifies the user of power and port failures by instantly sending an email to pre-defined addresses.

The series meets the network environment standards with IP 30 enclosure and has been tested under industrial EMI and safety standards.

The DX-526 has 6 ports supporting 10/100TX and 2 ports providing 100FX connectivity. It can operate in multimode and single mode, and comes with advanced SNMP functionality that includes features like MSTP, QinQ, QoS for 4 queues, 801.q VLAN, IGMP snooping and query mode. The products also have SNTTP and SMTP functionalities.

The series comes with 3-year carry-in warranty and online support for customers, and is priced up to Rs 81,000.
