

Dax Networks launches DX-509MG series

Dax Networks has launched the DX-509MG Series, a range of high performance L2 Managed Fast Ethernet Switches. This series is said to be ideal for retail applications and broadband distribution.

The series has three models—the basic model (DX-509MG), the enhanced model (DX-509MGE) and the POE model (DX-509MG-POE). The presence of eight 10/100 ports, eight RJ45 connectors and one Gigabit combo uplink port makes it ideal for connecting end-point PCs at the access level in a campus network.

The DX-509MG support 802.1X authentication and RADIUS, providing the ability to network securely.

It has a security IP function restricting unauthorized users from accessing and altering configurations. It can prioritize various tasks on the network, a crucial function for integrating voice and data over a switched network. It also supports SNMP, in-band and out-band management, CLI and Web interface.

The enhanced version (DX-509MGE) supports IPv6/IPv4 dual stack, helping protect the customer's investment whereas the DX-509MG POE model supports a full load for connecting all ports to any POE enabled device like IP Cameras, IP Phones, Access Points, etc.

Price: Rs. 49,000.
