

Ethernet managed switch

Dax Networks has launched a range of high-performance L2 managed fast ethernet switches. Priced at Rs 49,000,

the DX-509MG series is ideal for retail applications and broadband distribution.

The DX-509MG series comprises three models: basic (DX-509MG), enhanced (DX-509MGE) and POE (DX-509MG-POE). The DX-509MG is designed for networks where the number

of users being connected is minimal. The presence of eight 10/100 ports, eight RJ45 connectors and one Gigabit combo uplink port makes it ideal for connecting end-point PCs at the access level in a campus network.

The enhanced version (DX-509MGE) supports IPv6/IPv4 dual stack, helping to protect the customers' investment. It also supports IPv6 host, manager and application.
