

Dax launches Ethernet switches

Dax Networks has launched DX-509MG Series, a range of high-performance Layer 2 managed Fast Ethernet switches. Starting from Rs49,000, the products are targeted especially for retail applications and broadband distribution. The DX-509MG Series comprises three models - the basic model (DX-509MG), the enhanced model (DX-509MGE) and the POE (Power Over Ethernet) model (DX-509MG-POE). The products are designed for networks where the number of users to be connected is small. There are eight 10/100 ports, eight RJ45 connectors and one Gigabit combo uplink port incorporated into the product.

The new range adopts full Access Control List

(ACL) policy. The switch also supports 802.1X authentication and RADIUS, providing the ability to network securely. It has a Security IP function restricting unauthorized users from accessing and altering configurations. SSH protocol and HTTPS/SSL connection guarantees maximum security of switch configuration.

The enhanced version supports IPv6/IPv4 dual stack, helping protect the customer's investment. This version also supports IPv6 host, manager and application.

The POE model supports a full load for connecting all ports to POE-enabled devices like IP cameras, IP phones, access points, etc.

All products come with a three-year carry-in warranty and online support for customers. ■
