

DAX FIBER ADAPTER

Introduction:

Dax fiber-optic adapter is a small device used to connect fiber-optic cables together.

These adapters have many different shapes, but they all serve the same purpose.

The most common use for a fiber-optic adapter is simply to connect two fiber-optic cables to one another. Connecting two cables together can allow two devices to communicate from a distance through a direct connection with the fiber-optic line.

These simple types of adapters are often referred to as mating sleeves because they allow two cables to connect to one another.

Applications:

- Telecommunications
- Optical Networks
- LANs / WANs
- Fiber to the Home
